Don't Forget to Register Your Warranty!

Your MTW Hop is backed by Wolverine Airsoft's limited warranty. Scan the QR code or visit www.wolverineairsoft.com/warranty to read our full warranty and register your MTW Hop.

Getting Started

Your MTW Hop is a precise instrument containing many individual components. Before you begin, please see the diagram below and familiarize yourself with each component.

You will also need...

Bucking

We recommend the 70 degree Maple Leaf Macaron Bucking for the MTW Hop.

Nub

Installation

Fit the bucking onto the rear of the inner barrel, making sure the ridge on the inside of the bucking aligns with the groove in the inner barrel.

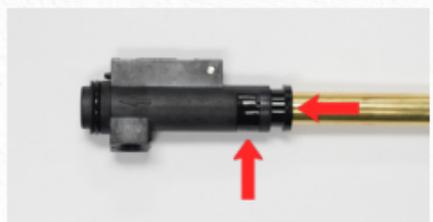

While lubrication is not necessary when using the recommended bucking, some thicker buckings may require it. Only apply a small amount to the outside of the bucking, being careful not to get lubricant inside or on the lip.

Insert the inner barrel with bucking into the MTW Hop. The groove on the inner barrel should be facing down and the two indentions should align with the barrel window.

Insert the C-clip into the barrel window so that it locks into the indentions. Slide the Tapered Locking Ring down the front of the barrel and secure it firmly inside the MTW Hop.

Insert the nub into the hop up arm as shown and close arm to hold the nub in place.

Fit one side of the Hop Adjustment Wheel onto front O-Ring as shown, then press the wheel fully into place. Make sure the hop up arm fits into the channel in the back of the wheel.

Now that it's fully assembled, install the MTW Hop, inner barrel and hop spring into the MTW upper receiver as shown.

Install the engine so that the nozzle fits into the MTW Hop. Use the engine to push the hop and inner barrel forward into the outer barrel.

Secure the engine and hop in place with the feed tube assembly.
